SKILLS

JavaScript TypeScript React

NextJS Cypress Rest API

GraphQL Git Tailwind

Node.js PHP PostgreSQL

Supabase AI

LANGUAGES

- **Italian:** mother tongue
- **English:** intermediate

ABOUT ME

Hello, I'm Daniele, a Full Stack Web Developer with almost 15 years of experience, specialized in front-end development.

In the last 5 years I worked with different teams and projects, mainly in the field as front-end developer for several webApps using ReactJs and many other js libraries.

In the last period I worked as a Full Stack Developer using AI to provide the best possible products for my current company.

My passion is to provide great user experience with readable and maintainable code.

WORKING EXPERIENCES

Meeters Srl

01/2022 - NOW

During this period I worked on several projects, mainly as a Frontend Developer on a B2C ticketing platform, with the aim of providing the best possible experience both in terms of site usability and business back-office development using technologies such as React, Typescript, NextJS and GraphQL.

I also learned how to develop apps for both iOS and Android using Capacitor and other analysis tools.

At the end of this period I took up again my knowledge of SQL and Node.js to re-implement all our company tools using AI.

It's been a long period filled with shifts and strategic changes, but we've always worked as a team to meet product expectations and final deadlines.

EDUCATION

Diploma of computer science
at I.T.I.S. Chilesotti Thiene (VI)

From when I was young I often
studied web technologies alone
as self-learner and also today I
love to take some times to
evaluate new technologies and
practicing them in some demo
projects.

HOBBIES

- Music
- Nature
- Camping
- Painting
- Meditation
- Digital Art

Freelancer Web Developer

07/2019 - 01/2022

In this period I worked remotely for an important customer in
the automotive industry with an international team of
developers and designers (speking english) where I improved
my knowledge about React, Redux, NextJs and agile
development techniques (with Gitlab, Jira as issue tracker).

During the pandemic I proudly worked in a webApp project for
buy&sale live jim/yoga lessons where I learned some new
React libraries like React-Query and Styled-components
deeply integrated with the backend team (Laravel as the
admin panel & WordPress for the content).

At the start of the pandemic I provided support to some
small/medium agencies to realize ecommerce projects using
PHP, WordPress, Woocommerce, JavaScript es6 & jQuery.

GestionaleAuto.com Srl

09/2014 - 06/2019

I joined as an employee with the mission of developing several
webApps to help Automotive Dealers to manage their
business.

In the last period I worked in the R&D team as Frontend
developer to build a custom CRM project where I learned
React, Redux, ReduxSaga and how to mix different techniques
to create deeply connected components for this real time CRM.

With this great team we also develop several admin panels to
provide statistics data about the automotive market and to
simplify the advertising process for our customers (using
Angularl, SCSS, CakePHP, Django REST, Flask and PostgreSQL).

During these years we migrated our customers sites to our new
and huge modular WordPress Network infastructure to help us
releasing new updates, cut the developemnt costs and allow
our customers to manage their content in a simpler and
unified way.

In this company I worked as solo web developer and learned how to build SEO oriented e-commerce and how to connect them to our custom admin panel to simplify the tracking process of our orders, billings, technical assistance and so on.

In this period I learned a lot of web technologies like: PHP, jQuery, CSS3, Mysql, CakePHP, WordPress, osCommerce
